Regarding this video: in Assignment zero where we were to find a video recording application, I found one for mac called jing, tested it, and converted it to a Youtube accepted file format with no problem. For some reason I am completely unable to accomplish this with my new file, available at the link above. I tried for an hour to find another program that could screen capture the video I made, other conversion apps with no success. So, in order to watch this video, you will have to download this .swf file and open it in your browser to view it. I sincerely apologize for the inconvenience and hope that it won't affect my score too badly.
